# RGB LED 모듈

# RGB LED 모듈

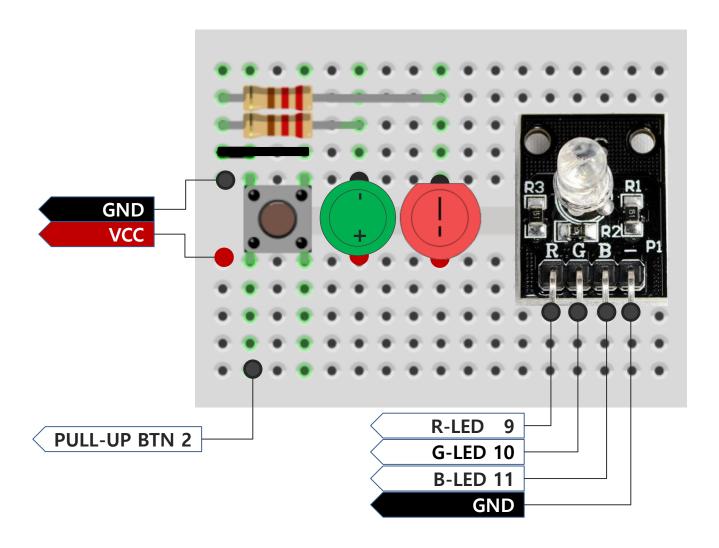

#### **❖** RGB LED

o R, G, B: 0 ~ 255 사이의 PWM값으로 색상 출력

# ❖ 회로도

## 

```
#include <PWMLed.h>
PWMLed red(9);
PWMLed green(10);
PWMLed blue(11);
void setup() {
    Serial.begin(115200);
void loop() {
 one_color(); // LED 1개씩 ON two_color(); // LED 2개씩 ON
  three_color(); // LED 3개 ON
```

```
// 3개의 LED 모두 OFF
void led_off(int d_time=2000) {
   delay(d_time);
   red.off();
   green.off();
   blue.off();
   Serial.println("-----");
```

## 

```
// LED 1개씩(R, G, B) ON
void one_color()
  Serial.println("R ON");
  red.on();
  led_off();
  Serial.println("G ON");
  green.on();
  led_off();
  Serial.println("B ON");
  blue.on();
  led_off();
```

```
// LED 2개씩(RG, GB, BR) ON
void two_color()
  Serial.println("R and G ON");
  red.on();
  green.on();
  led_off();
  Serial.println("G and B ON");
  green.on();
  blue.on();
  led off();
  Serial.println("B and R ON");
  blue.on();
  red.on();
  led_off();
```

```
// LED 3개(RGB) ON
void three_color()
  Serial.println("R and G and B ON");
  red.on();
  green.on();
  blue.on();
  led_off();
```

## 실습2: ColorRed 클래스

#### ❖ ex02/ColorLed.h

```
#pragma once
#include <PWMLed.h>
class ColorLed {
protected:
    PWMLed red;
    PWMLed green;
    PWMLed blue;
public:
    ColorLed(int red, int green, int blue);
    void rgb(int r, int g, int b);
    void off(int delay_time=0);
    void random();
};
```

## 실습2: ColorRed 클래스

#### ex02/ColorLed.cpp

```
#include "ColorLed.h"
